LITTLE PLACE LABS

Little Place Labs- *Real Time insights from space.*

Angel: Michael Jones
Analyst: Will Murphy
Senior Analyst: Stanley Qu

BAYLOR ANGEL NETWORK

Deal Overview

Seeking 500k SAFE, Equity or Convertible Note for a $3mm seed round.

TOPLINE

- **Raise Amount:** $500k
- **Capacity:** $3mm
  - Investor[1]
- **Financing Structure:** Equity
- **Stage:** Seed Round

KEY TERMS

- **Pre-Money Valuation:** [$#.#mm]
- **Dividend:** [#.#%]
- **Liquidation Preference:** [#.##x]
- **Participation:** [Fill in…]
- [Other Term #1]
- [Other Term #2]
- [Other Term #3]

1) Currently no specified lead investor

BAYLOR ANGEL NETWORK

Business Overview

Little Place Labs deploys AI software directly on satellites to deliver near real-time insights from space.

PROFILE

- **Background:** Founded in 2020
- **Status Quo:** Satellite data is stored onboard until a ground station pass allows it to be transmitted to Earth and processed, creating unavoidable deliver delays
- **Problem:** Satellite imagery is delayed by latency and heavy data downlink, limiting its value for time-critical users
- **Solution:** Deploy AI software directly on satellites to generate faster insights and reduce data downlink for time-critical users
- **Use Cases:** Defense & National security, Disaster Response, Commodities trading, Agriculture
- **Value Proposition:** By running AI directly on satellites, the company converts raw imagery into usable insights within minutes, reducing delivery time and lowering data transmission costs by approximately 30%.
- **Business Model:** Dollar per insight $300 to $1,500 for 25 square kilometer monitored area. Pricing tiered by geography, area size, capture frequency and delivery latency.

STRENGTHS

- **Funding Traction:** Phase I & II Small Business Technology Transfer (STTR)[1] non dilutive contracts awarded by the AFWERX
- **Market Validation:** $4mm in DoD contracts, multiple operational space missions, six partnership secured, and recent integration agreement with Kepler
- **Cost Savings:** By processing data on satellites, the company cuts downlink time and costs by over 50%, creating meaningful savings per satellite

KEY RISKS

- **Government Sales Cycle:** Lengthy buying cycles (18-24 months) and phased STTR contract validation slows revenue scaling and delays cash-flow generation
- **Third Party Dependency:** Reliance on partnerships with satellite operators may slow deployment and limit scaling flexibility
- **Integration:** One at a time satellite integration model introduces throughput constraints that may slow scaling as customer demand increases

Source: Atlasspace, AFWERX, UN-SPIDER, Little Place Labs Data Room

1) Small Business Technology Transfer (STTR) is a U.S. government R&D funding non dilutive contract awarded to small companies.

BAYLOR ANGEL NETWORK

Service Overview

Little Place labs uses edge computing to provide faster, more reliable insights.

DESCRIPTION

- **Service:** Deployable AI/ML[1] software that runs directly on satellites , on-orbit AI software platform that integrates with Earth observation satellites to process data in space
- **Differentiator:** The company deploys its AI software across multiple third-party satellites without requiring proprietary hardware, allowing customers to access insights from a broader network of sensors at lower cost.
- **User Experience**: Web platform that lets users' task satellites, receive alerts, and visualize insights across multiple locations
- **Hardware Agnostic:** The software is compatible with multiple satellite processors, allowing it to run on a wide range of existing satellites without requiring custom hardware

Processed Satellite Imagery

Demonstrated Performance

- **2024:** Demonstrated in-orbit deployment of AI software on third-party satellites
- **2025:** Little Place Labs delivered sub-15-minute maritime threat detection with ~86% vessel detection precision in a maritime security use case with MMEA.

Source: Little Place labs Data Room,

1) Uses government-compliant cloud environments (AWS GovCloud and Azure GCC) to meet regulatory requirements and support infrastructure scalability

BAYLOR ANGEL NETWORK

Market Overview

Defense-first strategy with plans to commercialize a capital-light satellite AI platform.

TARGET MARKET[S]

- **Primary:** U.S. Space Force and Air Force contracts
- **Secondary:** Commercial maritime, energy, commodities trading, and enterprise satellite SaaS customers
- **TAM:** $5bn[1], Total opportunity across U.S. defense analytics, commercial satellite insights, operator SaaS, and future marketplace potential
- **SAM:** $1.2bn[2], Defense and high-priority commercial segments requiring time-sensitive satellite intelligence.
- **SOM:** $40mm[3]Near-term opportunity based on current U.S. Air Force and Space Force contract pathways

GO-TO-MARKET STRATEGY

- **Dual Pipeline Model**
  - **National Security:** Leverage initial U.S. Space Force R&D contracts to secure larger follow-on production funding and expand into multi-year defense programs across additional military branches
  - **Commercial:** Use a direct enterprise sales approach to target trading, insurance, public safety, and maritime customers, scaling from early pilot contracts in 2026 to 20+ multi-year agreements by 2027–2028

VALUE PROPOSITION

- **Capex Savings:** By partnering with satellite operators instead of building its own fleet, Little Place Labs avoids the significant capital expenditures required by vertically integrated competitors
- **Time Savings:** On-orbit edge computing processes data directly on satellites, significantly reducing the time from image capture to actionable insight
- **Cost Savings:** By compressing data onboard the satellite, the company cuts transmission costs for satellite operators by ~50%

OUTLOOK

- **Market Growth:** Satellite data services projected to grow from approximately $12B to over $30B by 2030, reflecting roughly 15% CAGR
- **Trends:** ~70k satellites expected to launch into low Earth orbit over the next five years, increasing integration opportunities for Little Place Labs' onboard AI
- **Recent Activity:** In January 2026, D-Orbit raised $53M in a Series D round to expand its in-space computing and logistics capabilities, signaling growing investment in onboard AI and orbital edge processing infrastructure

BAYLOR ANGEL NETWORK

Source: Goldman Sachs, Satnews

1) TAM estimated at ~$5B annually across defense ISR analytics, commercial satellite intelligence, operator SaaS, and emerging orbital AI compute
2) SAM is estimated at ~$1.2B, representing U.S. defense ISR and commercial customers actively purchasing real-time satellite data insights, excluding hardware and infrastructure
3) Average U.S. Air and Space force contract is $3mm in Little Place Labs traction. Assuming 12 government tracts from both departments over next 3-5 years: $3mm * 12 contracts ~$40mm

Head-to-Head Comparison

Little Place Labs stands out with being hardware agnostic and delivering fast insights to broad use cases.

PRODUCT	Primary Customer Segment	Camera Modality[1]	Hardware Agnostic[2]	Time-to-Value[3]
BLACKSKY	Defense	Electro-Optical. Nighttime	✗	Under 90 Minutes
planet.	Government (Civil + Defense)	Multispectral, Hyperspectral	✗	~90 minutes
UBOTICA SEEING BEYOND	Defense & National Security	Thermal, Multispectral, Hyperspectral	✗	~20 minutes
Muon Space	Government Science	Optical, Thermal	✗	~20 minutes
SkyServe	Defense maritime focus	Multi-modal	✓	Not specified
LITTLE PLACE LABS	Defense, Maritime, Disaster, Commodities	Multi-modal[4]	✓	Under 7 minutes

Source: BlackSky, Planet, Uboitca, Muon Space, SkyServe, LittlePlaceLabs

1) Access to multiple camera modalities (optical, thermal, hyperspectral) to support varied use cases
2) Software works across many different satellite and cameras without being tied to one specific hardware
3) Time-to-value refers to the time it takes to receive the request satellite imagery
4) Multi Modal refers to the use of multiple Camera options, little place labs will be able to access thermal, optical, hyperspectral

BAYLOR ANGEL NETWORK

Team

Strong background in military space operations, with comparatively limited experience in aerospace software engineering.

MANAGEMENT TEAM

- Bosco Lai, *Founder*
  - Venture Partner at third Sphere, dealing with early-stage investing
  - VP at Events at Space Force Association, non-profit dedicated to supporting U.S. Space force
- Gaurav Bajaj, *Co-Founder & CTO*
  - Sr Consultant at Ripple, a fintech company
  - MBA from the University of Oxford
- David Braithwaite, *Chief Federal Strategy Officer*
  - 20+ years as retired U.S. Air Force officer
  - Managed defense projects for the NORAD and USAF
- Brian Barris, *Senior Satellite Software Engineer*
  - Co-Founder SkyTubeLive, secure drone live video streaming platform for first responders
  - Senior Engineer at Ursa Space Systems, space data analytics company
- Abbas Najmi, *GIS Software Engineer*
  - Software Developer at 3D RealityMaps GmbH, a 3D geospatial modeling company
- Sanyam Jain, *Business Development Associate*
  - Associate at Guidepoint, a network research company
- Matthew Whitley, *Senior Data Scientist*
  - Senior Data Scientist at Microsoft
  - Applied geospatial and machine learning on automated object detection.
- Rishabh Chaturvedi, *Strategic Business Dev. Manager*
  - Product owner at Kawa Space, a global intelligence and Defense company
- Karen Chan, *HR & People Management*
  - Director, Human Resources & Talent Acquisitions at Jamieson Wellness
- Shalaina Parikh, *Strategic Business Dev. Manager*
  - Recruiter at GRUBBRR, a self-ordering Kiosks and digital ordering software for restaurants
- Parampuneet Thind, *Data Scientist*
  - Develops AI systems on satellite platforms
- Kumar Satyam, *AI/ML Embedded Software Engineer*
  - AI Intern at Pantech.AI, a engineering education hardware company

BAYLOR ANGEL NETWORK

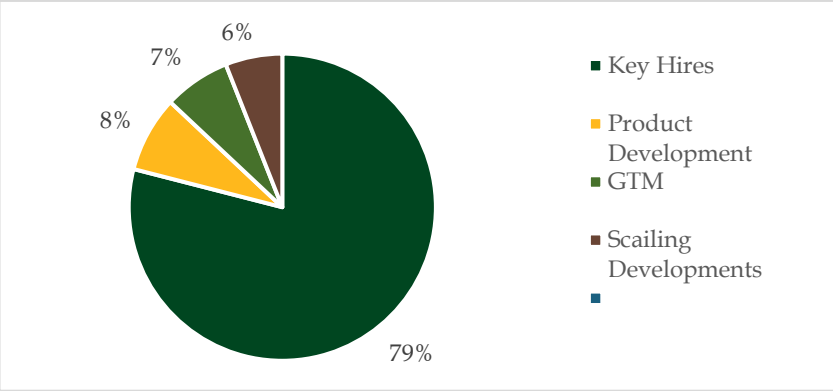

Funding and Scale

Little Place labs plans to use funds primarily for key engineering hires to further develop their product.

CURRENT GOALS

- **Use of Funds**[1]
  - **Key Hires & GTM:** Expand engineering and commercial teams to support scalable deployments and drive revenue growth
  - **Network Expansion:** Deploy across 50+ partner satellites to increase coverage and insight volume.
  - **Product Advancement:** Standardize sub-7-minute edge delivery for time-critical use cases

USES

ROADMAP

- **2026**
  - Transition U.S. Space Force R&D contracts into follow-on production funding
  - Expand paid commercial pilot programs
  - Deploy OrbitfyEDGE[2] and OrbitfyVIEW[3] across partner satellites
- **2027**
  - Scale real-time geospatial intelligence offerings
  - Expand into broader defense and commercial use cases
  - Launch Orbitfy in-orbit compute marketplace[4] for third-party AI workloads
- **2028**
  - Scale real-time geospatial intelligence offerings
  - Expand into broader defense and commercial use cases
  - Launch Orbitfy in-orbit compute marketplace for third-party AI workloads

BAYLOR ANGEL NETWORK

1) Use of funds estimated from forecasted financials, as management did not provide a detailed allocation breakdown
2) A web platform that lets users task satellites, receive alerts, and view processed insights in one interface
3) A future platform where companies rent on-orbit compute capacity from Little Place Labs to deploy and train AI models on integrated partner satellites

Financial Projections

Management expects high growth after 2026, positive EBITDA in 2026

MANAGEMENT MODEL

$ in 000s	2025A	2026E	2027E	2028E	2029E	2030E
Sales	$1,121	$1,530	$7,085	$25,351	$46,551	$102,693

EBITDA	*n/a*	($1,236)	($589)	$9,331	$20,907	$57,129

Note: No provided COGS or SG&A for 2025

BAYLOR ANGEL NETWORK

Financial Drivers and Assumptions

Little Place Labs plans to shift from government contracts toward usage-based and SaaS revenue.

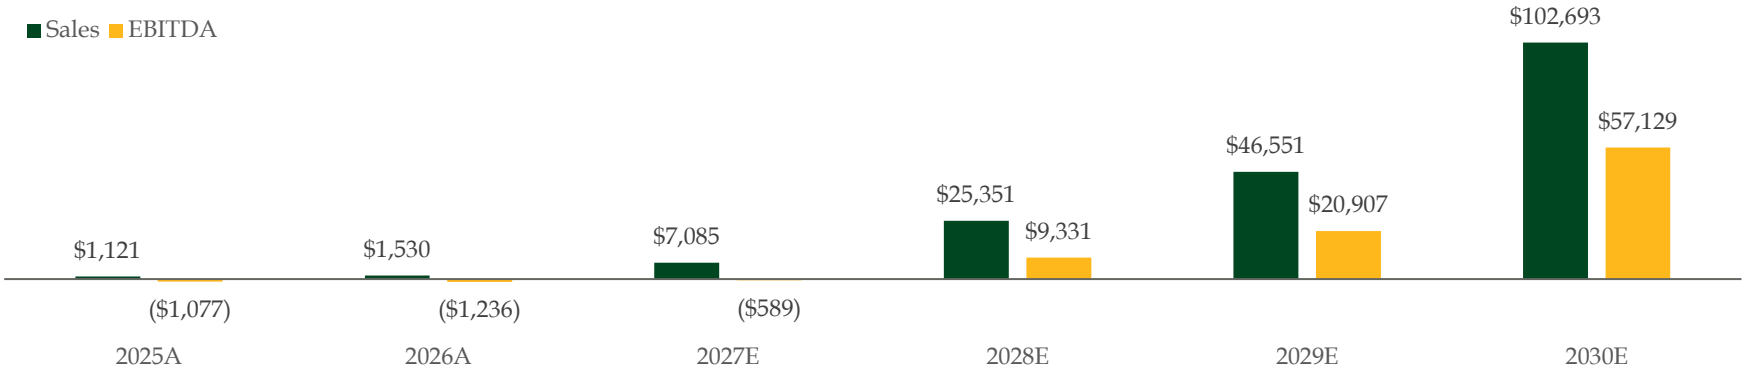

REVENUE DRIVERS AND ASSUMPTIONS

- **Gross Margin:**
  - Projected gross margin of 41%
  - Long term gross margin of 74%
- **Government Contracts:**
  - Accounts for ~60% of projected Revenue
- **Usage-Bases Pricing:**
  - Accounts for ~40% of projected revenue
- **SaaS Model:**
  - Account for ~5% of project revenue
  - Projected ~216% CAGR over forecasted period

COST DRIVERS AND ASSUMPTIONS

- **Cost Structure:** Payroll-driven model; projected 2026 payroll expense of ~$1.4M, representing the majority of operating costs
- **Defense Revenue Assumption:** Model assumes ~$2M in TACFI/DAF funding deployed over three years, dependent on contract conversion
- **Margin Expansion:** Gross margins improve with scale as fixed engineering payroll is leveraged across recurring insight revenue

MANAGEMENT FORECAST OVERVIEW - $ IN 000s

BAYLOR ANGEL NETWORK

Exit Analysis

Recent M&A activity suggests a viable acquisition path, with potential interest from defense primes.

EXIT ASSUMPTIONS

- **Final Ownership Percentage:** […]
- **Exit Year:** […]
- **Assumption 1:** […]
- **Assumption 2:** […]
- **Forecast Change:** […]

EXIT LANDSCAPE

- **Recent M&A Activity**
  - **Vantor Holdings:** Software focused, AI enabled spatial intelligence company acquired by Advent International for $6.4bn in May 2023
  - **Planetek:** Privately held Italian geospatial analytics company, acquired by D-orbit for an undisclosed price
- **Potential Acquirer**
  - **Defense Primes**[1]**:** Major Defense Contractors: May acquire Little Place Labs to add real-time satellite analytics to their defense and intelligence offerings

MOIC & IRR – [REVENUE/EBIT] VS. MULTIPLE

Copy From Excel

Source: Pitchbook
1) Defense primes are major military contractors like Lockheed Martin and Northrop Grumman

BAYLOR ANGEL NETWORK
